

Gas-metered offices: seasonal agreement has clear limits

Madrid / local-calendar 2024 / 3 administrative buildings; 25 names excluded / electricity complete, winter gas observed

Electricity baseline: mean April / May / October / November. Positive excess is a seasonal proxy, NOT AC metering.

All 12 months retained: winter excess in 2 buildings remains visible; gas meters do not prove gas-dominant heating.

Signed monthly excess vs CDD18: r range 0.763 to 0.936; median 0.783 (12 points/building).

Missing summer gas stays missing. No model sizing, absolute electricity-error or energy-savings claim.
